

M.S. Graduate Research Assistantship Available!

The UW-Madison Specialty Crop Innovations Group is currently looking for an M.S. degree student that's interested in fruit and vegetable production research. More specifically, the student will work on practical and sustainable ways that we can optimize vegetable production while reducing crop inputs (fertilizer, pesticides, labor, water, etc.). The student will also have a chance to learn about specialty fruit and vegetable production at the full range of scales, from small, diversified farms to large scale processing vegetables and potatoes.

A few more details:

Where: The lab of Jed Colquhoun, Professor and Extension Specialist in the Department of Horticulture at UW-Madison.

What: The Research Assistantship **includes a stipend, full tuition and health insurance coverage**. The successful candidate will have an undergraduate degree in agricultural or other plant-oriented majors and a strong interest in applied field research.

When: The Assistantship is available from Fall 2021 through June 2024, with flexibility on the start and end date depending on the successful candidate's timeframe.
